### DRIP IRRIGATION HANDBOOK - Netafim

Remember, when designing a drip irrigation system, design the system for the flow of water that will be required when the tree is fully mature. There are four common methods to use drip irrigation for a tree or group of trees: 1) run laterals down a row of trees with emitters placed on the lateral line at the base of each tree;

### Trees | Drip Irrigation

Design the irrigation layout. A typical drip tube can reach a maximum length of 200 ft (60 m), or 400 ft (120 m) if the water enters the line at its center. If you need more than one drip tube, you can install a lateral line with two or more drip tubes extending from it at different points.

### How to Install a Drip Irrigation System (with Pictures ...

Drip Irrigation System Design From the simplest system to the most complicated, all drip irrigation systems have a few basic things in common: a water source, tubing, and the emitters. Start designing the drip irrigation system at the water source.
