Hatcher Solution

Solutions to Homework # 2 Hatcher,
Chap. 0, Problem 16.1 Let $R_1 := M_{n,1}$
 $R = \{x \in R_1 \mid x_n = 0\}$, $N = \{x \in R_1 \mid x_1 = \dots = x_n = 0\}$
We define a topology on R_1 by declaring
a set $S \subseteq R_1$ closed if and only if, $S \cap R_n = \emptyset$,
the intersection $S \cap R_n$ with the finite
dimensional subspace $R_n = \{x \in R_1 \mid x_k = 0, k > n\}$ is closed in the Euclidean

Hatcher Solutions | Vertex (Graph Theory) | Algebraic Topology

Let $i: V \rightarrow U$ be an inclusion. Then $i^{-1}(c \times 0) = \emptyset$ since $H(x;0) = i$ and $H(x;1) = c \times 0$ for $x \in U$. Therefore, this V is the desired neighborhood of x such that the inclusion $V \rightarrow U$ is null-homotopic.
