Solution Problem 1. Recall that a map  $F$  between complex vector spaces is called differentiable (in the complex sense) at  $x$  if there is a complex linear map  $L$  such that  $F(x + y) = F(x) + Ly + R(x, y)$  with  $\lim_{y \rightarrow 0} R(x, y) / y = 0$ . If  $F$  is differentiable as a complex map, with  $DF$  continuous, one calls  $F$  holomorphic, or complex analytic.
