fins, vernier engines or engine gimbals for thrust vectoring, gyroscopes) and a structure (typically monocoque) to hold these components together.

## **Rocket - Wikipedia**

A rocket is a device that channels explosive force to create thrust. Generally, the rocket consists of a fuel or propellant stored in a secure container, usually a cylinder. The cylinder must be open only in one direction, so as to let out the explosive force of the fuel when it is ignited.

## **How Is a Rocket Made? | Sciencing**

The frame is made from very strong but light weight materials, like titanium or aluminum, and usually employs long "stringers" which run from the top to the bottom which are connected to "hoops" which run around around the circumference. The "skin" is then attached to the stringers and hoops to form the basic shape of the rocket.

Ballast can be any material that provides weight for the rocket and ensures the rocket can coast once it is launched. The mass should be *above* the fins. The farther the better. Use Play-Doh or clay as ballast as it is soft, malleable, and unlike pebbles or marbles, won't fall out or scatter when the rocket launches.
