W hen people think of the field of data science in general, or of specific areas of it, such as natural language processes, machine learning, or computer vision, they rarely consider linear algebra. The reason linear algebra is often overlooked is that tools used today to implement data science algorithms do an excellent job in hiding the underlying maths that make everything come true.

Linear maps are mappings between vector spaces that preserve the vector-space structure. Given two vector spaces V and W over a field F , a linear map (also called, in some contexts, linear transformation or linear mapping) is a map: \rightarrow that is compatible with addition and scalar multiplication, that is $(+)$ = $+$ ($)$, = ($)$ for any vectors u,v in V and scalar a in F .
