One of the main request of many customers is to use MS Excel spreadsheet as data output for reports and analysis. Most of the standard SAP components (such as ABAP ALV, WebDynpro ALV, System menu, etc.) provide the option to export data in MS Excel 2003 or in many other MS Excel compatible file formats (csv, plain text, mhtml and so on).

abap\_bool cannot be used here because it is defined in the type pool abap, not in the data dictionary. In this case, resort to boole\_d or xfeld. Create your own data element if you need a custom description. ABAP may be the one single programming language that does not come with a universal Boolean data type. However, having one is imperative.

Q1. What is OOPS ABAP ? Ans: Object orientation (OO), or to be more precise, object-oriented programming, is a problem-solving method in which the software solution reflects objects in the real world. A comprehensive introduction to object orientation as a whole would go far beyond the limits of this introduction to ABAP Objects.
