Now, they've discovered that about 95% of the bacteria and other harmful bugs, (yeast, fungus and parasites), are not free-floating, but are instead thriving in the body, protected within these biofilm communities. Here's how biofilms operate: They secrete a gluey plaque that permanently attaches along your insides. This plaque then turns ...

First of all, it's important to realize candida is a fungus, which is a type of yeast, and it is an opportunistic (and aggressive) pathogen 61. In other words, when candida senses a weakness in you, e.g. those of us with an autoimmune disease or general poor gut health (us leaky gutters!), it starts going rogue. And growing like crazy.
