Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.

Cancer - Wikipedia

The Cancer Drug Manual© provides concise, evaluative information on drugs used in oncology. Inclusion in this index is not an indication of the funding status of a drug through BC Cancer. To determine drug coverage, see Benefit Drug List.

Cancer Drug Manual

In general, if the cancer is found only in the part of the body where it started it is localized (sometimes referred to as stage 1). If it has spread to a different part of the body, the stage is regional or distant. The earlier kidney and renal pelvis cancer is caught, the better chance a person has of surviving five years after being diagnosed.

Cancer Stat Facts: Kidney and Renal Pelvis Cancer - SEER

Prostate cancer treatment stands on the brink of a major advance with the development of a new treatment that zeros in on cancer cells to destroy them. The therapy, called 177 Lu-PSMA-617, uses a molecule that selectively seeks out and attaches to a specific protein on the cancer cell surface. The technology then delivers radiation that damages DNA and destroys the cancer cell.
