Robert D. Christ, Robert L. Wernli Sr., in The ROV Manual (Second Edition), 2014 13.2.8 Baseband transmission. Baseband transmission is described as the raw electrical signal transmission typically surrounding some zero value. A signal is considered “baseband” when it includes frequencies at or near 0 Hz up to the highest frequency in the signal. For instance, a baseband digital ...

What is Signal Conditioning? Analog signals need to be correctly "prepared" before they can be converted into digital form for further processing. Signal conditioning is an electronic circuit that manipulates a signal in a way that prepares it for the next stage of processing. Many data acquisition applications involve environmental or mechanical measurement from sensors, such as temperature ...
