A good way to check is to do a quick DIY troubleshooting by running a wire from the positive battery terminal to the solenoid on the diesel pump on the engine side. This will bypass the relay and you'll know who the culprit is. Intermittent starting problems can also be caused by a bad earth connection to the engine.

The knock sensors can in rare cases pick up other harsh engine noises as well. If this is the case it is recommended to fix the cause of the noise before proceeding. You always want the knock retard to read zero under wide open throttle conditions. It is normal for it to show some KR when stomping on the throttle and also during the shift.

Not long after 100K it needed two new turbos, EGR valves a bit later and then the gearbox munched itself. The engine was impressively smooth and quiet for a diesel but the fuel economy was barely any better than the petrol. At £7k you can't just jib it off if you need to spend £2k on it either, so personally, I'd walk away.
