A pterygium of the eye (plural pterygia or pterygiums, also called surfer's eye) is a pinkish, roughly triangular tissue growth of the conjunctiva onto the cornea of the eye. It typically starts on the cornea near the nose. It may slowly grow but rarely grows so large that it covers the pupil and impairs vision. Often both eyes are involved.

Pterygium (eye) - Wikipedia

Episcleritis is a benign, self-limiting inflammatory disease affecting part of the eye called the episclera. The episclera is a thin layer of tissue that lies between the conjunctiva and the connective tissue layer that forms the white of the eye (sclera). Episcleritis is a common condition, and is characterized by the abrupt onset of painless eye redness. There are two types of episcleritis, nodular ...

De entre todos los sentidos, la vista es el más desarrollado en el ser humano. Ser capaz de ver nos permite percibir los estímulos y acontecimientos que están presentes a nuestro alrededor, y esto nos permite analizar y evaluar la situación de forma inmediata y ser capaces de reaccionar a ella, incluso de forma instintiva.

Daltonismo: causas, síntomas, tipos y características

Biometry is the method of applying mathematics to biology. The term was originally used by Whewell in the 1800s for calculating life expectancy. The refractive power of the eye primarily depends upon the cornea, the lens, ocular media, and the axial length of the eye. When planning for cataract surgery, in order to achieve the desired post-operative refraction, the required power of the ...
